A second opinion **before the expensive decision** — from hands-on engineering experience.

Technical leadership, mentoring, delivery, product strategy and the documentation that outlasts the meeting — from Copenhagen.

Advisory

Technical decisions, taken with someone who has taken them before

+45 50 10 61 84 · Copenhagen, Denmark

Carefully Crafted With Love by D.

Leading teams, planning the work, and writing the decisions down so that they outlast the person who made them. The work records describe the starting situation, what was done and the result.

Bring one technical or delivery decision and the constraints around it. A first review can produce a written comparison of options, a recommendation and the next actions for your team.

Advisory and leadership work · Pricing and engagement options · Discuss your project

Start with the result you need

Tell us what your business needs to achieve. We connect software, data and infrastructure around the people who use them.

A senior engineer in the room

Technical Leadership & Consulting

Somebody on your side of the table when a supplier, a budget or an architecture decision needs a second informed opinion.

Held 4 repositories to one history standard

Held four repositories to one history standard — conventional, emoji-free, no attribution trailers, enforced by a commit-message hook — alongside 48 instruction documents that govern how the work is done.

Took the test suite to 8.9 seconds

Took the test suite from six tests over a sixty-second limit to 135 passing in 8.9 seconds by profiling the main thread and removing the two calls it sat inside for 3,989 samples out of 4,017.

Adopted Swift 6 strict concurrency over C

Adopted Swift 6 complete strict concurrency with no actors, bridging a blocking C event loop to the main actor through one producer, one consumer and one ordering — after establishing that a task per event loses the ordering the interface depends on.

How we work

Understand first

We learn the problem before we propose a solution. The brief you arrive with is the start of that conversation, not the end of it.

Build it to last

Durable over quick, clarity over cleverness. The system still has to be workable by the people who inherit it.

Stand behind it

We agree any ongoing operation or support as part of the engagement. Handover makes responsibilities and the next contact route clear.

{ Consulting & Leadership }

Growing the team you already have

Team Building & Mentoring

Hiring, onboarding and coaching, so the knowledge settles with your own people rather than leaving with a consultant.

Managed a team delivering IT support

Managed a team delivering IT support, data recovery, and hardware repair services to over 1,000 clients, ensuring high-quality service.

Saved 150 hours a month across 30 projects

Enhanced project efficiency, saving 150 hours per month across 30 projects by optimizing workflows and resource management.

Established a Technical Support department

Established a Technical Support department, servicing over 10,000 clients with IT support and troubleshooting solutions, tracking client requests in a CRM.

Getting it delivered

Project Management (Agile)

Somebody accountable for scope, dates and the awkward conversations, so a project has one owner instead of five opinions.

Held 4 repositories to one history standard

Held four repositories to one history standard — conventional, emoji-free, no attribution trailers, enforced by a commit-message hook — alongside 48 instruction documents that govern how the work is done.

Put the documentation under its own linter

Put the documentation under its own linter — a per-file line budget that only ratchets down, an index requirement and a real-path check — which found six of nine plans marked done while carrying unchecked boxes, and fourteen commit-gating tasks named in no document.

Ran development as 51 written initiatives

Ran the site's development as 51 written initiatives across 54 plan documents, each carrying its open boxes, its measurements and the decisions it declined — including six of eight agent-readiness findings refused with the reason recorded.

Working out what to build

Product Strategy & Requirements

Turning what the business wants into something a developer can build, and saying out loud what is not worth building.

Rewrote error messages to stop blaming users

Rewrote the application's error messages against a written tone standard after a refused sign-in blamed the user for mistyping when the provider actually required an app-specific password, and covered it with a test that names the provider.

Ran development as 51 written initiatives

Ran the site's development as 51 written initiatives across 54 plan documents, each carrying its open boxes, its measurements and the decisions it declined — including six of eight agent-readiness findings refused with the reason recorded.

Built a 22-linter commit gate

Built a commit gate of 22 one-line linters plus five that earn a paragraph, with no warning tier and no inline suppressions permitted, covering HTML, CSS, JavaScript, Python, YAML, Markdown, shell, links, spelling, secrets and typography.

Writing it down so the next person can follow

Technical Documentation

Handovers, runbooks and manuals that let your own staff operate the system without ringing whoever built it.

Made six collectors state what they skipped

Made six reporting collectors state the part of their input they never read — files that stayed shut, probes not installed, journal lines unrecognised — and fitted thresholds to 116 measured samples, after establishing that a blind collection and a healthy host render the same page.

Held 4 repositories to one history standard

Held four repositories to one history standard — conventional, emoji-free, no attribution trailers, enforced by a commit-message hook — alongside 48 instruction documents that govern how the work is done.

Rewrote error messages to stop blaming users

Rewrote the application's error messages against a written tone standard after a refused sign-in blamed the user for mistyping when the provider actually required an app-specific password, and covered it with a test that names the provider.

AI agents built for the work your trade does

Connected

Wired to your ERP, CRM, booking system and mailbox through described tools, each with one narrow job.

Measured

Scored against real cases your experts write, so every change to a prompt, a tool or a model is tested before it ships.

Supervised

What it does alone and what a person approves, written down with you, enforced in the tools and traced step by step.

See how agents are built Ask about your trade →

Tell us what you are building.

No form, no funnel, no sales sequence — just one e-mail to a person who will read it.

Start the conversation

This address shows the advisory work only. The company also builds software, works with data and runs infrastructure — that side of it is at engineer.company.
See everything Engineer ApS does →

Begin with a focused improvement

A workflow, a data flow or a system that needs improvement can be a useful first task. We can agree its scope together.

See what it costs Get in touch →

Plan the first conversation

Tell us the result you need, what is already in place and when you need it. We can use that to discuss the next step.
